A Gender Perspective...

Women are invaluable in disaster risk reduction and climate change adaptation processes if real community resilience and significant reduction of disaster impacts are to be achieved. (UNISDR.org)

We had the opportunity to sit down with two of our Disaster Management Programme Officers, Aysya Kaba (AK) and Azmine Nimji (AN), for their perspectives on DRR.

Q: Based on your experience, why do you think it is important for women and girls to be involved in DRR initiatives?

AK: Generally, women and children are most vulnerable and are more prone to experiencing the severe effects of a disaster. The gender difference in the loss of life after natural disasters is directly related to the disadvantages that women face, such as unequal access to resources and limited ability to make household decisions, which affects their ability to receive early warnings and probability of survival following a disaster. DRR efforts, if designed and implemented using a gender-based approach, can enhance community resilience, response and recovery efforts, and thereby increase the capacity of women and girls to better cope and recover from the impacts of disasters.

AN: Representing half the world’s population, women and girls are more vulnerable and face, such as unequal access to resources and limited ability to make household decisions, which affects their ability to receive early warnings and probability of survival following a disaster. DRR efforts, if designed and implemented using a gender-based approach, can enhance community resilience, response and recovery efforts, and thereby increase the capacity of women and girls to better cope and recover from the impacts of disasters.

AN: FOCUS has involved women through a gender-sensitive approach in the community. Women have been endowed with participatory and leadership roles to help protect and rebuild their communities before and after disasters.

Q: How has FOCUS involved women in DRR initiatives?

AK: FOCUS has aimed to involve women -- where possible -- as agents for change within the fabric of communities. Their involvement as agents for change will be critical to root policy, planning and implementation of DRR initiatives.

AN: FOCUS has involved women through a gender-sensitive approach in the community. Women have been endowed with participatory and leadership roles to help protect and rebuild their communities before and after disasters.

Editor’s Message

Welcome to the 7th edition of the Global Newsletter!

In this issue, we highlight the importance of Women in Disaster Risk Reduction (DRR), particularly in Afghanistan, India, Pakistan and Tajikistan.

“Women hold up half the sky.”

When it comes to disasters, this old Chinese proverb holds true. Often it is the women who carry their families, their villages and their communities through a crisis.

The significant roles women can and often do play in mitigating, preparing, and responding to disasters is often overlooked by one-dimensional media portrayals of them as simple victims of disasters. Indeed, according to the United Nations Population Fund, women and children account for more than 75% of refugees and displaced persons as a consequence of humanitarian emergencies.

A study of the 1999 cyclone in Bangladesh revealed that women and children accounted for 65% of all fatalities. Women are often the most vulnerable in times of crisis because of their subordinate status in certain societies, their lack of mobility and their role as the caretaker of the family.

Despite these challenges, research indicates that women are often the first and most effective responders in times of emergencies. They focus on safeguarding the family and the community, while serving as a pillar for recovery. No matter what the circumstances, women naturally step forward to take care of the sick, injured and elderly; they anticipate the basic needs for survival such as securing food, water, shelter and attending to medical needs.

According to the United Nations International Strategy for Disaster Reduction (UNISDR), resilient and sustainable outcomes to disasters are more likely to be achieved when women are integrated into Disaster Risk Reduction (DRR) planning, thereby empowering them to participate in educational programmes on evacuation and preparedness measures. In 2012, the United Nations’ (UN) International Day for Disaster Reduction honored “Women and Girls - The [in]Visible Force of Resilience.” This day acknowledged the role women play in disaster management and advocated the inclusion of women as competent and effective leaders in disaster planning and response.

This vision is one that is shared by FOCUS and, as a result, is the theme of this quarter’s newsletter. Profiles featured in the newsletter highlight some of the women who “hold up the sky” through their service and dedication to effectively anticipate, prepare and respond to humanitarian emergencies around the world.

FOCUS has made a continuous effort to empower women in DRR through various measures such as training and awareness programmes at the community level. Through DRR initiatives, FOCUS aims to facilitate gender-inclusive environments by involving women to enhance community resilience, enabling them to become agents of change.

As we train, educate and empower women in our units, we are also contributing to the development of the community at large. Moving forward, it is FOCUS’ ambition to bring more women to the forefront of the major policy discussions and forums in order to enhance the quality and gender equality of programming.

Lastly, we would like to thank our donors, friends and wonderful staff and volunteers for their continuous generosity and support.

Warmest regards,
FOCUS Team
Policewomen and DRR in Pakistan

Pakistan is undergoing quite a change when it comes to female involvement in the public sector. The change can be seen through the various training initiatives that have been made available for females to become first responders.

Many women have joined the police force, a form of public service traditionally considered male-dominated. While involved in the standard activities of a police woman, such as providing security and investigating and resolving criminal cases, these policewomen are also actively participating in response to man-made and natural disasters.

Helping Communities Reduce the Risk of Disasters

Fatima comes from the Shotor Jangal village of the Doshi district in the Baghlan province of Afghanistan. Fatima is prone to multiple risks including flooding, droughts and earthquakes, which often affect the livelihoods of the community at a whole. Motivated by a passion to help others, after graduating high school Fatima chose to work for FOCUS as a Social Mobilitator. Fatima has been working with women in the remote areas of Baghlan to raise their awareness and knowledge of threatening hazards, as well as helping them to conceive measures to prepare or mitigate them.

“The role of women in society is changing day by day. Women are able to play an instrumental role in Disaster Risk Reduction,” said Fatima. As a result of her hard work, Fatima was recently promoted as Team Leader for FOCUS in Baghlan and has found herself making a difference to the lives of those in the community and, in particular, to women in the remote areas where she lives.

Establishing the Search and Rescue Team in Badakhshan

FOCUS Afghanistan has established the first ever advanced Search and Rescue Team in the Badakhshan province of Afghanistan, comprising of 24 volunteers, of which 10 are women. The team will be deployed in the event of disasters throughout the province, and will comprise of volunteers from FOCUS Pakistan who have been trained in search and rescue techniques. The techniques include: physical and technical searches of collapsed buildings, rope rescue, casualty handling, lifting and rigging and communication procedures during operations. The team is also trained in how to use specialised equipment such as snake-eye cameras, disc cutters and thermal imaging cameras.

It was noted that the female volunteers were especially engaged and enthusiastic during the training as they were keen to serve the most vulnerable victims of disasters - who are often women and children. The programme was supported by the United States Agency for International Development as part of its Community-Based Disaster Risk Reduction project.

As one of the key partners in DRR, FOCUS Afghanistan - representing the international community - addressed the audience on the International Disaster Risk Reduction Day on October 17, 2012 in Kabul, Afghanistan. The event was celebrated by the Afghanistan National Disaster Management Authority and the U.N., and the theme was "Women and the [Visible Force of Resilence]." The Executive Officer, Ruby Ajanee, emphasised the importance of the inclusion of women in different sectors. Ms. Ajanee congratulated the government of Afghanistan for establishing a Women's Affairs Committee within the government structure as a first step for uplifting women's role in the society. "Although there were efforts by the government to include women in different sectors, there were still very few women in decision making roles, and the government of Afghanistan has to take a number of steps," stated Ms. Ajanee. The event was attended by representatives from the office of the Second Vice President of the Islamic Republic of Afghanistan, the Ministry of Women's Affairs, Ministry of Rural Rehabilitation and Development, Head of the Office for the Coordination of Humanitarian Affairs and international organisations working in the area of DRR as well as the media.

Empowering Women for Disaster Risk Reduction

Reshma Keshwani resides within a region that is often affected by fire, floods, civil unrest, earthquakes, tsunamis and other hazards. She applied for her appointment as the Regional Crisis Committee (RCC) Member - South West Asia region in December 2012. As a RCC member, she took the responsibility to help FOCUS promote DRR initiatives in her region, disaster response drills were facilitated and a number of women were among the most vulnerable to disasters. Reshma is the only female RCC member who has attended the workshops and programmes of FOCUS India on capacity building of volunteers both in her region and has also played a leading role in the implementation of all the DRR activities in Southern India.

"My journey with FOCUS began in 2010, when I attended FOCUS' training in Mumbai and developed an interest in the Disaster Risk Reduction and Disaster Management. I learnt that as an RCC member, I have an important role to play, which provides safety to the community in my region, especially to the women and girls. FOCUS India, through its programme, promotes measures to safeguard the fundamental rights to survival by keeping their families and communities safe from any risks. FOCUS India helps to build community and prepares the community to cope with any situation. FOCUS has taken into account that several of its previous recovery programmes in the wake of disasters are driven by women. Gender equality is thus an essential element of our work in building resilience to disasters in Indian communities and reducing the risk to lives, property, livelihood and livestock.

Women and girls are increasingly taking the lead in putting time, experience and knowledge to good use in designing disaster plans for their families, communities and regions. Acknowledging the need to have more women-volunteers as first responders at the community level, FOCUS India aims to train at least 10% of women as CERT volunteers every year. This year in July, FOCUS has organised CERT training exclusively for female volunteers in Vapi Sanj Council where 12 women were already trained as CERTs. Since its inception in 2002, FOCUS India has trained over 6,000 CERT volunteers in the states of Gujarat, Andhra Pradesh and Maharashtra. This cohort of CERT volunteers includes over 2,000 women members who are well aware of the differential vulnerabilities of women in society and the need to address needs and concerns in a disaster situation.

Capacity Building Through Gender-Inclusive Strategies

Women and children are the most vulnerable groups of society when it comes to natural disasters. This is especially true in Tajikistan, a country with a population characterised by a high outflow of male labour migration to neighbouring countries. FOCUS Tajikistan is striving to involve as many women as possible in their disaster awareness and preparedness building training. FOCUS Tajikistan has enabled women to become active members of CERTs and in many instances equips them to take responsibility as team leaders.

Odobekova Zebo, 41, is the head of the CERT in Khodjorde village in Roshkhala district, Gorno Badakhshan Autonomous Oblast (GBAO). Over the course of two years, she has taken the lead in helping her community through a series of disastrous events within her own village and in neighbouring areas.

At the beginning of April 2012, three households in Khodjorde village were under threat from mudflows. Zebo, in cooperation with other female members of her village, facilitated the evacuation of the most vulnerable members of the households at risk, providing them with safe haven nearby. Other female volunteers keep FOCUS Tajikistan and the capital of Emergency Management (EMOG) and Civil Defence (CoDo) abreast of the evolving situation.

"We delivered first aid to at least nine people who were injured while trying to clear the mudflow and divert its stream. We also helped the victims overcome the shock by providing them with basic psychological help," Zebo recounts.

Zebo and her team provide help not only during crisis situations, but also proactively apply knowledge and skill gained via CERT trainings in the course of their daily lives. Last year, Zebo was driven to a village to help a man that had attempted suicide by jumping from the roof of his house and providing artificial respiration. This kept the man stable prior to receiving professional treatment.

Residents of Khodjorde village can recall how FOCUS Tajikistan volunteers’ efforts and assets were saved by Zebo, her team and their skills.
Helping Communities Reduce the Risk of Disasters

Fatima comes from the Shutur Jangal village of the Doshi district in the Baghlani province of Afghanistan. Women are prone to multiple risks including flooding, droughts and earthquakes, which often affect the livelihood of the entire community as a whole. Motivated by a passion to help others, after graduating high school Fatima chose to work for FOCUS as a Social Mobiliser. Fatima has been working with women in the remote areas of Baghlani to raise awareness and knowledge of threatening hazards, as well as helping them to conceive measures to prepare or mitigate them.

“The role of women in my society is changing day by day. Women are able to play an instrumental role in Disaster Risk Reduction,” said Fatima. As a result of her hard work, Fatima was recently promoted as Team Leader for FOCUS in Baghlani and has found herself making a difference to the lives of those in the community and, in particular, to women in the remote areas where she lives.

Establishing the Search and Rescue Team in Badakshan.

FOCUS Afghanistan has established the first ever Search and Rescue Team in the Badakshan province of Afghanistan, comprising of 24 volunteers, of which 10 are women. The team will be deployed in the event of disasters throughout the province, and will comprise of volunteers from FOCUS Pakistan who have been trained in search and rescue and medical techniques. The techniques include: physical and technical searches of collapsed buildings, rescue procedures, casualty handling, lifting and rigging and communication procedures during operations. The team is also trained in how to use specialised equipment such as snake-eye cameras, disc cutters and thermal imaging cameras.

It was noted that the female volunteers were especially engaged and enthusiastic during the training as they were keen to serve the most vulnerable victims of disasters - who are often women and children. The programme was supported by the United States Agency for International Development as part of its Community-Based Disaster Risk Reduction project.

As one of the key partners in DRR, FOCUS Afghanistan - representing the international community - addressed the audience on the International Day for the Observation of the International Day of Disaster Risk Reduction on October 17, 2012 in Kabul, Afghanistan. The event was celebrated by the Afghanistan National Disaster Management Authority and the UN. The theme was “Women and Girls: the ‘Visible Force of Resilience’". The Executive Officer, Ruby Ajanee, emphasised the importance of the inclusion of women in different sectors.

Empowering Women for Disaster Risk Reduction

Reshma Keshwani resides within a region that is often affected by fire, floods, civil unrest, earthquakes, tsunamis and terrorism. After successfully completing her appointment as the Regional Crisis Management Committee (RCC) Member - Southern India region in December 2012, as RCC member, she took the responsibility to help FOCUS promote DRR initiatives in her region and encourage community members, especially among those members who are most vulnerable to disasters. Reshma is the community’s first female who has attended the workshops and programmes of FOCUS India on capacity building of volunteers both in her region and has also played a leading role in the implementation of all the DRR activities in Southern India.

“My journey with FOCUS began in 2010, when I attended FOCUS’ training in Mumbai and developed an interest in the Disaster Risk Reduction and Disaster Management. I learnt that as an RCC member, I have an important role to play, which provides safety to the community in my region, especially to the women and girls. FOCUS India, through its programme, promotes measures to safeguard their fundamental rights to survival by keeping their families and communities safe from any risks. FOCUS India helps to build communities and prepares the community to cope with any situation. FOCUS has taken into account that several of its previous recovery programmes in the wake of disasters are driven by women. Gender equality is thus an essential element of our work in building resilience to disasters in Indian communities and reducing the risk to lives, property, livelihood and livestock.

Women and girls are increasingly taking the lead in putting time, experience and knowledge to good use in designing disaster plans for their families, communities and regions. Acknowledging the need to have more women volunteers as first responders at the community level, FOCUS India aims to train at least 30% of women as CERT volunteers every year. This year in July, FOCUS has organised CERT training exclusively for female volunteers in Vapi Sanjivani Council where 12 women were already trained as CERTs. Since its inception in 2002, FOCUS India has trained over 6,000 CERT volunteers in the states of Gujarat, Andhra Pradesh and Maharashtra. This cohort of CERT volunteers includes over 2,000 women members who are well aware of the differential vulnerabilities of women in society and the need for their community and support in disaster situations.

Capacity Building through Gender-Inclusive Strategies

Women and children are the most vulnerable groups of society when it comes to natural disasters. This is especially true in Tajikistan, a country with a population characterised by a high outflow of male labour migration to neighbouring countries. FOCUS Tajikistan is striving to involve as many women as possible in their disaster awareness and preparedness building trainings. FOCUS Tajikistan has enabled women to become active members of CERTs and in many instances equips them to take responsibility as team leaders.

Ozbekboza Zebo, 41, is the head of the CERT in Khidorjev village in Roshkela district, Gorno Badakshan Autonomous Oblast (GBAO). Over the course of two years, she has taken the lead in helping her community through a series of disaster events within her own village and in neighbouring areas.

At the beginning of April 2012, three households in Khijarov village were under threat from mudflows. Zebo, in cooperation with other female members of her village, facilitated the evacuation of the most vulnerable members of the households at risk, providing them with safe haven nearby. Other female volunteers keep FOCUS Tajikistan and the capital of FOCUS Tajikistan and the Government of Tajikistan from Civil Defense (CoS) abreast of the evolving situation.

“We delivered first aid to at least nine people who were injured while trying to clear the mudflow and divert its stream. We also helped the victims overcome the shock by providing them with basic psychological help,” Zebo recounts.

Zebo and her team help provide not only during crisis situations, but also proactively apply knowledge and skills they gained via CERT trainings in the course of their daily lives. Last year, Zebo was driven to a village to help a man that had attempted suicide, providing him with professional treatment and providing artificial respiration. This kept the man stable prior to receiving professional treatment.

Residents of Khidorjev village can recall occasions where the lives of many residents and assets were saved by Zebo, her team and their skills.
A Gender Perspective...

“Women are invaluable in disaster risk reduction and climate change adaptation processes if real community resilience and significant reduction of disaster impacts are to be achieved.” (UNISDR.org)

We had the opportunity to sit down with two of our Disaster Management Programme Officers, Aysa Kaba (AK) and Azmine Nimji (AN), for their perspectives on DRR.

Q: Based on your experience, why do you think it is important for women and girls to be involved in DRR initiatives?

AK: Generally, women and children are most vulnerable and are more prone to experiencing the severe effects of a disaster. The gender difference in the loss of life after natural disasters is directly related to the disadvantages that women face, such as unequal access to resources and limited ability to make household decisions, which affects their ability to receive early warnings and probability of survival following a disaster. DRR efforts, if designed and implemented using a gender-based approach, can enhance community resilience, response and recovery efforts, and thereby increase the capacity of women and girls to better cope and recover from the impacts of disasters.

AN: Representing half the world’s population, women and girls are influential advocates through their invaluable roles as mothers, teachers, and caretakers within the fabric of their community. Their involvement as agents for change will be critical to root policy, planning, and implementation of DRR initiatives.

Q: How has FOCUS involved women in DRR initiatives?

AK: FOCUS has aimed to involve women – wherever possible and culturally appropriate in relief efforts, including in the areas of decision-making, planning and implementation. For response and interventions, FOCUS defines vulnerability criteria that prioritises aid for women, children, elderly and disabled-headed households. In order to do this, FOCUS identifies female volunteers from Community Emergency Response Teams and other organisational leaders to assist with relief distribution and to explain the contents of relief packages.

AN: FOCUS has involved women through a gender-sensitive approach in the community. Women have been engaged with participatory and leadership roles to help protect and rebuild their communities before and after disasters.

Women are invaluable in disaster risk reduction and climate change adaptation processes if real community resilience and significant reduction of disaster impacts are to be achieved.
